

5 Reasons

YOUR **CAR** AND **HOME**

NEED

Window Tinting

sunstoppersnw.com

The sun is vital to our survival on earth, but its rays have plenty of adverse side effects as well.

We've all been there - you crawl into your car on a warm summer day to find the stifling heat unbearable. There's nothing to do except crank up the AC and suffer for a few minutes.

Or maybe you wake up one day, disappointed to find that your beautiful living room furniture is beginning to fade.

It's frustrating. Harsh rays from the sun heat our homes and cars to high temperatures, cause furniture to fade, and even affect our health!

But it doesn't have to be that way.

When you invest in quality window tinting, you protect yourself and your belongings from the sun while still reaping the positive benefits of sunshine.

Let's take a look at 5 ways tinting the windows of your car and home can improve the quality of your life.

1. Enjoy consistent interior temperatures

Window film blocks up to 98% of the solar energy, so your house and car stay cooler during the hottest months of the year.

Window film also retains more heat in the winter, meaning your home and vehicle will be more comfortable all year round.

With a quality window tint, you can minimize the intensity of sunlight and enjoy relaxing in the sunroom or taking a road trip.

2. Prevent eyestrain from painful sun glare

Working or driving in an overly bright environment is incredibly frustrating. And sometimes, it's more than just frustrating - it's dangerous.

One recent study has shown that serious car accidents increase by 16% when it's very sunny and glare is present. Another study has shown that as many as 9000 accidents relating to sun glare occur each year! That's more than is caused by icy roads.

Thankfully, window tinting dramatically reduces eyestrain and sun glare both in your home and vehicle.

With window tinting, sunlight is reduced to a comfortable level, whether you are in your car or home.

3. Stop interior fading

It's maddening to discover that your valuable furniture and floors have faded due to harsh ultraviolet rays that penetrate glass.

Irreplaceable artwork can also be destroyed even in partial sun exposure.

Thankfully, window film reduces fading up to 99% by blocking invisible Ultraviolet Rays (UVA, UVB, & UVC)

4. Block harmful UV radiation

Amir Khoshnevis, Doctor of Optometry, recommends that all his patients tint the windows of their home and vehicle.

Why?

Because he has seen first hand that harmful UVA and UVB radiation can cause cancer, melanoma, cataracts, and degenerative eye diseases.

XPEL Prime window film helps solve this problem by protecting you and your family from 99% of Ultraviolet Rays.

5. Feel secure with complete daytime privacy

During the day, tinted windows make it difficult to see inside a house or car.

That means you can walk around the house in your PJ's or sack out in the car - all without worrying about others observing your private life!

Conclusion

Whether you want to reduce cooling costs, protect your eyes, or increase your privacy, getting your windows tinted is the way to go.

At Sun Stoppers, we offer automotive, residential, and commercial window tinting. No matter what your needs are, we strive to provide excellence in quality and service.
